HELP ME

CONCEPT PITCH · OCTOBER 2026

ABB Help Me

Real people. Real conversations.

A safe, verified space where every ABB employee can ask, share and feel supported.

Working prototype · Expo / React Native · iOS, Android and web

Employees need help, but rarely know where to ask

Three needs come up again and again, whether you are an intern, an engineer or a manager:

“I need an answer.”

Leave, VPN, a policy: fast and correct, from a source I can trust.

“I need to say something safely.”

Stress, a difficult manager, a doubt. I'll only speak if it can't be traced back to me.

“I want to be seen.”

Recognition for helping others and for wins, especially as an intern or new joiner.

12 bn

working days are lost every year to depression and anxiety, about US$1 trillion in productivity

21%

of employees worldwide are engaged at work

Sources: WHO & ILO (2022), mental health at work; Gallup, State of the Global Workplace 2025.

One app to ask, share and get support

Capy guides employees to the right place, and every screen below is from the working prototype.

Ask Capy

Points you to the right resource

Community Q&A

Verified, anonymous answers

Well-being

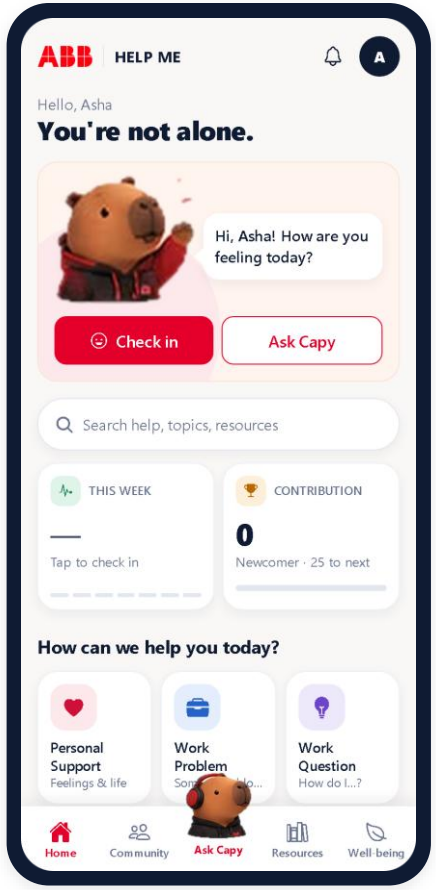

1-tap check-in, private trends

Resources

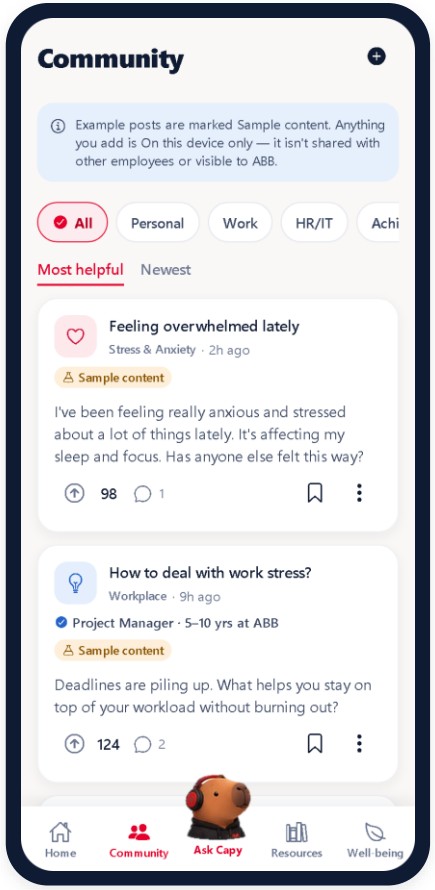

HR, IT, EAP and policies together

Recognition

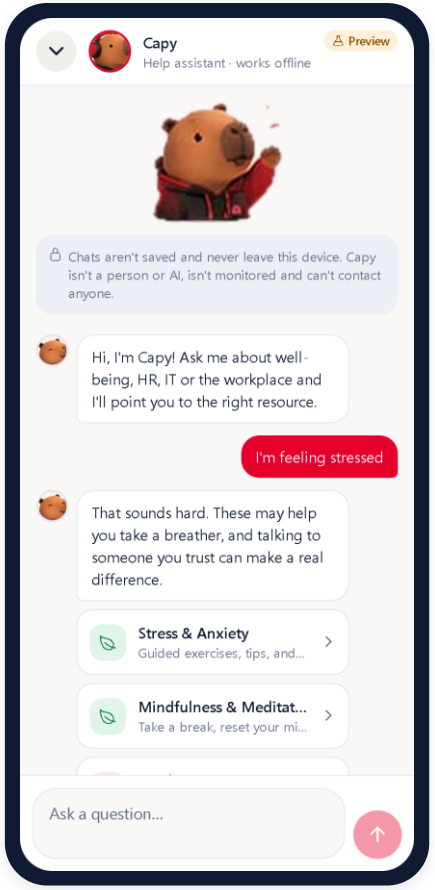

Achievements and a helpfulness score

Home: Capy greets you

Community: most helpful first

Ask Capy: guided answers

Built around what employees told us they need

Status reflects the prototype today; Phase 2 adds the shared backend.

BUILT

Mood and weekly stats

One-tap check-in with tags; week and month trends, private to the device.

BUILT

Contribution score

Rewards helpful answers, capped daily, never used in performance reviews.

PARTLY BUILT

Verified, anonymous voice

No names. Optional role and experience band, e.g. “Intern · <1 yr at ABB”.

PARTLY BUILT

Moderation

On-device check stops attacks and leaks; AI and human review next.

PARTLY BUILT

Answers you can trust

Upvotes, downvotes with a reason, accepted answers; HR and IT mark Official.

PARTLY BUILT

Capy assistant

Points to the right resource offline today; AI on approved HR/IT content next.

Why not just Reddit, Teams or the intranet?

Reddit's format, made safe, accurate and specific to ABB.

What matters	Reddit	Teams / intranet	ABB Help Me
Only verified colleagues can join	No	Yes	Yes
Anonymous, with role context	Partly	No	Yes
Official answers from HR and IT	No	Partly	Yes
Rewards helpfulness, not popularity	No	No	Yes
Well-being and support built in	No	No	Yes
Private: not visible to managers	Partly	No	Yes

Verified, not public

Helpful, not viral

Supportive, not monitored

Capy makes asking for help feel safe

Same Capy, different moments, built on well-studied behavioural psychology.

Dresses for your role, reacts to your mood

WHY IT WORKS

Cuteness invites care

Round, soft “baby-schema” features trigger warmth and lower defences.

A listener that never judges

People disclose more to a virtual agent they see as non-judging (Lucas et al., 2014).

Mirroring builds trust

Capy reacts to your mood, so you feel heard, not processed.

Celebration builds habits

Cheers and progress bars use positive reinforcement and the goal-gradient effect.

PROVEN ELSEWHERE

Duolingo

Duo the owl’s reminders and celebrations turned daily practice into a habit.

Finch

People look after a virtual bird by completing real self-care tasks.

Headspace

Friendly characters make meditation feel approachable, not clinical.

Clippy (the lesson)

A mascot that interrupts gets resented. Capy never interrupts or guilt-trips.

Architecture: local-first today, backend-ready by design

Screens talk only to interfaces, so Phase 2 services plug in without rewriting the UI.

PHASE 1 · BUILT

Mobile app
Expo / React Native · iOS, Android, web

Repository interface
The only way screens read or write data

Encrypted on-device database
SQLCipher · key kept in the OS keystore

Capy assistant (offline) | Moderation layer 1 | Demo verifier

Same interfaces

PHASE 2 · PLUG-IN SERVICES

Company SSO
Verify employment, store no identity

Shared community
Votes, answers, official replies

AI moderation
Plus human review and appeals

AI assistant
On approved HR and IT content

Aggregate insights for HR
Only for groups of 10+ people, after works-council approval

20+
screens built

43
automated tests passing

1 codebase
iOS, Android and web

0 bytes
leave the device in Phase 1

Impact for employees and for ABB

What we expect to change, and how a pilot will measure it.

For employees

- Answers in minutes, not ticket queues
- A safe outlet that stays anonymous
- Recognition for helping colleagues
- A gentle route to support on hard days

For ABB

- Fewer repetitive HR and IT tickets
- Know-how shared across sites and roles
- Anonymous, aggregate signals of hotspots
- Stronger engagement and retention

PILOT SUCCESS METRICS

Time to first answer

Median, per question

Questions resolved

Share with an accepted or official answer

Tickets avoided

Repeat HR/IT tickets vs. baseline

Weekly active users

And check-in participation

Risks and how we mitigate them

Designed in from day one, not added afterwards.

Fear of surveillance

Local-first. Managers and HR never see mood or identity; only aggregates of 10+ people, after legal and works-council review.

Re-identification

No names. Broad role and experience bands, shown only when the author opts in for that post.

Harmful content

On-device check stops attacks and leaks before posting; AI screening, human moderators and appeals in Phase 2.

Wrong or outdated answers

Downvotes need a reason; accepted answers rise to the top; HR and IT can mark answers Official.

Someone in crisis

Never blocked or punished: Capy shows support and emergency routes, with a clear “not monitored” notice.

Gamification pressure

Points capped daily and never used in reviews; no streak guilt. Capy never interrupts (the Clippy lesson).

Roadmap and what we need

A working prototype today; a one-site pilot is the next step.

PHASE 1 — Done

Prototype

- Local-first app with Capy
- Community, well-being, resources
- 43 automated tests

PHASE 2 — Next

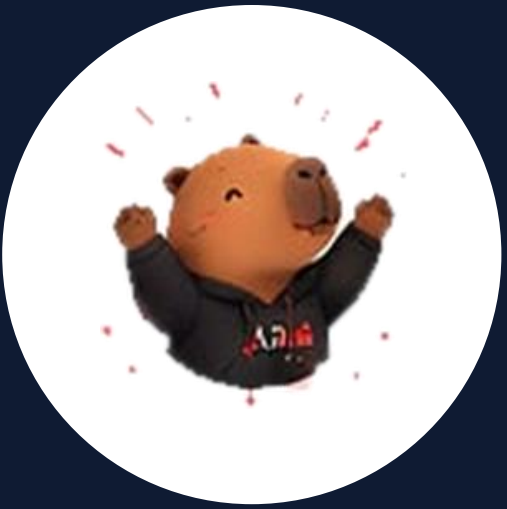

Pilot

- One site, about 12 weeks
- SSO, shared community, AI moderation
- Official HR and IT answers

PHASE 3 — Later

Scale

- More sites and languages
- Aggregate insights for leaders
- Link to HR/IT service tools

What we need to start the pilot

- **Executive sponsor**
- **One pilot site**
- **HR and IT content owners**
- **Privacy, legal and works-council review**
